

October 27, 2013

Mr. Greg Carney, COO
Nuovo Biologics
3901 SW 47th Avenue, Suite 404
Davie, FL 33314

Dear Mr. Carney,

The purpose of this letter is to give a general summary of my experiences to date in using your new experimental anti-viral drug in my practice on an early pilot study basis and to thank you for the opportunity to participate.

I have used your product to treat some 50 dogs with canine distemper. As you know, this disease is often fatal to dogs. I have been quite encouraged by the results.

We have treated more than 50 dogs, using a combination of PVX and our standard of care, which includes fluids and antibiotics in many cases. Over 85% of the dogs we treated recovered, and many were put up for adoption almost immediately.

While this is not a true clinical trial in many ways, these results seem significant to me and are very encouraging.

If you are still interested in having me treat other animals in my care with your product for this disease, I am still interested in participating in further pilot studies as I believe I have seen significant benefit to the animals in my care. I see a fair amount of canine distemper in my practice and would use this type of product if it were commercially available.

Sincerely,

Stephanie Polley, DVM, Medical Director
